

Managed Web Application Firewall Service

Security On-Demand's™ Managed Web Application Firewall (WAF) Service is designed to help you solve issues that are critical to the security of your web applications. We help to relieve the burden and liability involved with managing and maintaining business applications, e-commerce sites, intranets and other applications utilizing web-based architectures. Our unique model provides the following benefits:

- Quick time to deployment.
- Relieves Cap Ex Costs - Hardware, Licensing, Support & Monitoring rolled into a single monthly price.
- Product expertise required to tune, maintain, upgrade, monitor, and manage is minimized.
- Relieve staffing burden by leveraging our 24x7 Staffing Coverage, 365 days per year.
- Holistic protection by integrating with other Security On-Demand solutions, including Advanced Threat and Log Analysis Service.

System Architecture

- Non-intrusive, out of band deployment.
- Positive Security Models – including dynamic profiling to determine 'normal' behavior for web applications.
- Negative Security Models – utilizing signatures and application scanning to identify attacks.

Key Advantages

- Real-time continuous monitoring and web enforcement.
- Automates compliance with industry standards
- Detects web application defects that vulnerability scanners might miss.

Security Operations Monitoring

- Monitored protocols include HTTP, HTTPS, SSL, SML, SOA and AJAX.
- Alerting and monitoring response options: phone, email, automated blocking.
- Severity Mapping – based on levels 1-5 for default incident handling priorities.
